Wipro's Zoom-to-Cloud for Oracle Cloud

Zoom-to-Cloud is a cloud journey framework that addresses every concern, at every step, right from planning to deployment and continuous modernization to the cloud. It leverages several tools, e.g., the Jumpstart Kit, designing critical business processes in Oracle Cloud, ensuring modern best practices applicable to specific industries reducing the need for complex and costly customizations.

Expert View level: Strategic

Sectors concerned: All

Topics covered: Wipro Zoom-to-Cloud

Priority: ●●●

Zoom-to-Cloud methodology

One of Wipro's leading offerings in the Oracle Cloud space is Zoom-to-Cloud. Its methodology brings templates, expertise, and accelerators to support customers through cloud alignment, velocity, and adoption.

Before covering Wipro's Zoom-to-Cloud, PAC will provide a short overview of Wipro's leadership and strategy changes.

In June 2020, Wipro announced its first Western-born CEO & MD to take office. Thierry Delaporte has vast experience after 25 years at Capgemini, where he held several leadership roles, including COO. The Frenchman is set to grow the business with a more local focus rather than regional. One of the first visible changes made by Delaporte is the doubling down on the European market. Wipro will deploy six country-specific leaders in Europe to grow the business and expand Wipro's visibility and market reach locally.

In part, this strategic change is expected to boost Wipro's Oracle business. One of such offerings is Zoom-to-Cloud for Oracle. **What is Zoom-to-Cloud?**

Zoom-to-Cloud is part of a broader offering for technology led business transformation, and includes three major frameworks: Ignite-for-Cloud (assessments), Zoom-to-Cloud (implementations), and Thrive-in-Cloud (Cloud application support and continuous innovation). These offerings' scope combined with Wipro's strong domain expertise and state-of-the-art technologies aim to elevate

experience, business, and technology transformation while providing continuous value realization. Wipro has similar offerings for other application platforms, such as Wipro's SAP migration service **Safe Passage to Cloud**, e.g., Safe Passage to HANA.

Essentially, Zoom-to-Cloud is a cloud journey framework that addresses every concern, every step, right from planning to deployment and beyond. Addressing the question of how to harness the cloud swiftly, effectively, and economically while establishing a cognitively connected smart enterprise capable of maximizing the value of Oracle Cloud investments (ERP, HCM, SCM, CX, EPM, etc.).

Wipro's Zoom-to-Cloud for Oracle Cloud goes-to-market via three pillars: Cloud Solution Alignment, Cloud Solution Velocity, and Cloud Solution Adoption. Each of these pillars contains several tools and functionalities.

Cloud Solution Alignment – ensuring Oracle compatibility, stability, and functionality

- **Digital Navigator Assessment (DNA)** evaluating cloud capability gaps, cost risks, and opportunities while providing a cloud deployment timeline.
- **Target Operating Model** establishes an alignment with CXO priorities.
- **JumpStart Kit** is a business process library ensuring Standard Oracle functionality. Safeguarding the design of critical business processes in Oracle Cloud, adopting industry-specific modern best practices, and reduced

customizations. It leverages pre-built industry process maps, automation tools, and implementation accelerators.

- **Wipro HOLMES** offers over 40 pre-built AI Oracle Solutions. HOLMES invokes intelligent analysis to detect anomalies preemptively and bolsters AI/ML capabilities in Oracle Cloud apps.
- Industry-specific Fusion SaaS supported by Wipro's Strong Industry Domain teams.

Cloud Solution Velocity – ensuring faster data migration, testing, and functional setup

- **Scaled Agile Framework (SAFe)** and **CloudByz** for Oracle Cloud. These are project management tools built as a scalable and flexible platform.
- **QuMic** for faster data migration to cloud (high volume, data extraction, mapping, and loading). Leverages automation and pre-built integrations.
- AI powered **Touchless Configuration BOTs** for Functional Configuration setups into Cloud environments and faster execution.

Cloud Solution Adoption – end-user adoption and continuous value realization

- **Digital Experience Strategy** for UX and service design.
- **Org. Change Management (OCM)** for Oracle Cloud to enhance user adoption.
- **Business Command Center** for KPI definition and monitoring; Business Process mining to enhance KPI outcomes.
- Application pre-built learning paths, interactive job aids, and contextual support.

Overall, the Zoom-to-Cloud enable businesses to dive in the world of the cloud while ensuring that data is cleanly migrated.

Key takeaways

- In Europe, Thierry Delaporte (CEO & MD) will strengthen Wipro's offerings at country level.
- Zoom-to-Cloud ensures a comprehensive cloud migration and implementation plan is in place through process mining while deploying at speed.
- Zoom-to-Cloud enables a strong focus on business processes and business change while making the technical delivery predictable.
- Wipro's domain expertise is a differentiator setting the mind of the customer at ease.

PAC's comments on Zoom-to-Cloud

Wipro's Zoom-to-Cloud for Oracle Cloud is a solid offering that is appealing to many businesses and organizations worldwide.

One of its strengths is providing customers the opportunity to leverage and maximize their existing Oracle technology investments. Companies would adopt Greenfield undertakings in an ideal world and start fresh with a clean basis and code. However, for the majority of companies carrying a heritage, this is rarely the case. Why? Because CFOs will look at a balance sheet and see existing Brownfield investments which are rarely scrapped (if entirely scrapped, this likely leads to an investment loss).

Oracle's on-premise portfolio is still more extensive than its cloud business, and Oracle will continue to support its more traditional customer base. However, this does not mean that these more legacy-bound customers are not considering moving partial or full workloads to some cloud form. These are often complex and costly undertakings. Wipro's Zoom-to-Cloud offering helps these companies risk assess and prepare a comprehensive roadmap from preparation to deployment. It is essentially enabling a cloud for critical business processes and workloads ready for continuous transformation with added resilience and embedded technologies (e.g., AI/ML, automation, etc.) while adhering to Oracle's standard functionality. Capable of harnessing the cloud swiftly, effectively, and economically for a cognitive enterprise. What differentiates Wipro is its strong domain expertise coupled with Zoom-to-Cloud. Businesses need a partner that understands their industry-specific IT and OT for quicker uptake and scalability.
