

## Oracle migration: Making it child's play

With Wipro's Quick  
Migration to Oracle Cloud  
(QuMiC) platform

It is almost impossible not to have heard some CEO or CTO at a cloud seminar or congress go dreamy-eyed about cloud. One said to me, “Lionel, I can have a new server running in cloud in under five minutes. It used to take us an infernal eight weeks to do this internally.” I can see why cloud feels like the next big thing after sliced bread: It spells freedom; it defines agility; it doesn’t burn a hole through budgets.

But my counter question is simple, “What do you do with centralized on-premise applications and data which currently are the heart and brain of your business such as Oracle ERP, HCM or E-Business Suite? These are systems you have invested millions in. You have entrusted them with important business data. How easy is it to migrate them to cloud?” There is nervous fidgeting when I say this; I sense anxiety. My audience begins to feel I am the anti-hero (like Jim Holden of *The Expanse*—if you are up with your sci-fi on Netflix you’ll immediately know how I feel). Cloud was supposed to set us free, it was supposed to liberate everyone from the grip of the technological arcana practiced by IT

teams. But the journey to cloud isn’t always perfect. Transitions are tricky and can quickly go pear shaped. Reason: Manual efforts to migrate configurations and data are slow, error prone and expensive.

As a long-time observer of cloud developments, especially around core business applications, one thing stands out. It takes time, money and patience to fix errors that no one anticipated when planning the migration. So it was a delight to see our migration platform move 1,400 contract lines from the Oracle instance of a large Saudi industrial corporation in 41 minutes instead of the 46 hours it would have taken to do it manually. For a UK-based utility, we saved 20% deployment time and costs when migrating a hybrid application scenario spanning an Oracle cloud and an on-premise footprint. Cloud experts will agree that maintaining the accuracy and integrity of code and migration paths is extremely difficult for hybrid-based applications.

So how did we do this?

## A migration tool that manages all your headaches

It's a question I get asked often. It is at the top of the mind of every Oracle customer planning to migrate to cloud. Here's the short answer: We used QuMiC, our Quick Migration to Cloud platform that accelerates migration of ERP systems to Oracle Cloud. QuMiC automates manual tasks, including configuration, data, and

code migrations. Whether the implementation is in one location or in multiple locations around the globe, QuMiC works effortlessly and accurately, taking out all the rigmarole involved in managing customization as well (Pssst! An integrated analysis tool does that). Our 200+ prebuilt rules for code review ensure that errors are repaired and an automated test routine ensures continued code quality.

Fig 1: List of features of QuMiC

While I am at it, let me slip in the bonus gains. When the migration is complete, the IT team can rest easy because Oracle automatically keeps the cloud instance current. Looked at another way, it means your Oracle implementation will

not go obsolete. One CIO all but admitted that QuMiC took away all the challenges in migration from the IT team! Confessions don't get better than that.

The reason QuMiC is working wonders for our clients – from construction and industrial firms in the Middle East to utilities in the UK and manufacturing organizations in the US – is that

it was developed from a customer’s point of view. The platform kept three aspects at the core of its design:

**Enhance ROI on Oracle Cloud implementations:** We ensure this by reducing the overall costs and implementation time by up to 30% along with reduction in errors thus minimizing cost of rework.

**Achieve faster time-to-market:** We use a threefold method to do this—first, by shortening the cloud upgrade by up to 30%; second, by realizing faster download, additions, modifications, and upload of configurations with a robust user interface; and third, by consolidating multiple Oracle E-Business Suite environments to the cloud.

**Enhance delivery predictability and retain individuality:** This is achieved by using automation to eliminate error-prone manual tasks, using predefined review and testing before code deployment and analytics to understand customization and to migrate custom code safely.

## The hard questions you must ask (to take a sure step to migration)

Analyst studies indicate that overall cloud adoption rates are projected to increase from 58% in 2016 to 85% in 2019. This means migrating your Oracle applications to cloud is inevitable. Before considering a solution, here are the critical questions to ask:

- Does the migration tool include prebuilt configurations to move from Oracle E-Business Suite to Oracle Cloud and from cloud to cloud—and does it support multiple countries?
- Does the tool automate configuration, data, and code migration to Oracle Cloud?
- Does the tool support all modules for Oracle Enterprise Resource Planning Cloud?
- Is the tool powerful enough to handle bulk contract uploads?
- Does the tool provide prebuilt code reviews and automated unit testing?
- Is DevOps enabled for code?
- Are there prebuilt integrations for using service-oriented architecture?
- Is the tool for collecting and uploading configurations, data and code, secure?

If your answer is largely “No” to these questions, your organization would benefit greatly from a platform like QuMiC (that has a big “Yes” to all those questions).

QuMiC is good enough for most organizations to hit the cloud migration ball out of the park. Having said that, the good part is that QuMiC is only the beginning for your Oracle Cloud migration journey; a number of modules are being integrated into the platform to address your future needs and turn work into child’s play.

Now, I know you’ve heard tech junkies say that you can’t just take ERP and move it to cloud. I say, why not?

## About the author

**Ravishankar Subramanian** - Practice Head,  
Oracle Technologies, Wipro Limited.

Ravi brings about 20+ years of strong expertise and experience in transforming enterprises and integrating diverse people for a common cause. His key strength is in delivering business transformation programs, in addition to the regular sales, account management and delivery management functions. He has been a keynote speaker at top forums like the Evanta CIO Summit. He also holds an executive degree from Harvard Business School.

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading global information technology, consulting and business process services company. We harness the power of cognitive computing, hyper-automation, robotics, cloud, analytics and emerging technologies to help our clients adapt to the digital world and make them successful. A company recognized globally for its comprehensive portfolio of services, strong commitment to sustainability and good corporate citizenship, we have over 175,000 dedicated employees serving clients across six continents. Together, we discover ideas and connect the dots to build a better and a bold new future.
