Protecting data access and integrity

Microsoft Security Services from Wipro and data security controls in Microsoft Azure strengthen your cyber security program
Business data will always be an attractive target for cybercriminals. As business reliance on data and remote work continues to grow, the risks of data loss become greater. A report on mobile security found several concerning trends. As an indicator of risk, 43% of companies have sacrificed security, yet they are twice as likely to have been compromised if they do so. Companies recognize that any security compromise can have significant impacts:

87% said they were concerned that a mobile security breach could have a lasting impact on customer loyalty

Two-thirds that suffered a mobile-related compromise said the impact was major and 55% suffered lasting repercussions

29% said they suffered a regulatory penalty as a result of a mobile-related security compromise

As these statistics indicate, strong and up-to-date cyber security is a critical requirement for doing business today.

The challenges of protecting your business data

Today, your business must protect more data that is:

- Generated by more users, applications and devices
- Stored in more places and by more partners and providers
- Governed by many regulatory requirements and internal policies
- Subject to exposure, theft or tampering by cyber-attacks that are increasing in frequency and sophistication

As these factors indicate, a strong and up-to-date cyber security program is vital for every digital business.
Wipro takes an integrated approach to proactive data protection that minimizes risk and controls loss. Our portfolio of security services is designed to deploy the right solutions for your business activity and data.

Information protection services are designed around Microsoft Azure solutions and features include data classification and labeling, data loss prevention, management of security keys, advanced threat protection, disk encryption, and protection of Cloud storage.

Database security services focus on protection measures at the database level including authentication and access control, firewall rules, threat detection, cell-level encryption, data masking, auditing, and monitoring. Wipro also offers broader security services including consulting, integration and management that address your business and compliance requirements for data security.

Consulting and architecture services offer risk assessment, definition of compliance and privacy controls, security architecture design and guidance for a deployment roadmap.

System integration services cover design, implementation, migration, testing, and production rollout of an integrated security solution for hosts and storage security.

Managed services provide 24x7x365 Wipro resources for continuous security monitoring and incident response to detect attacks on servers, storage and database systems to prevent data loss.

Wipro offers value-added solutions and services that simplify, expedite and seamlessly implement Microsoft data security technologies, processes and service management. Wipro’s framework for data lake security provides holistic protection by leveraging host of Microsoft security controls and third-party solution integrations.

As an Azure Expert Managed Services Partner and a Microsoft Global System Integrator, we offer our clients security experts and analysts who are skilled in Microsoft security solutions. Wipro has also been designated a Microsoft Security Center of Excellence for our elevation of employee skills and support for solving key security challenges in the lab.
