

Beyond Savings: AI-Powered Procurement Outsourcing

Procurement Outsourcing Services Research Scope	
Procurement data management	The process of managing item master, catalog records, contract content and supplier master files, including adding, changing or deleting information contained in such files/records.
Intake management, requisition and PO processing	Intake management captures and routes procurement requests to the appropriate channels. Requisition processing involves identifying needs and completing requisitions for goods and services. PO processing includes issuing purchase orders, finalizing contracts, and confirming supplier acceptance to formalize transactions.
Sourcing execution	Sourcing execution includes the process of identifying, validating and selecting suppliers for direct materials, indirect materials and capital goods and services as well as the process of negotiating terms, delivery, price and quantities with suppliers.
Invoice processing	The process of paying suppliers, vendors or external third parties for goods, services or freight shipments. These are normally considered trade payables.
