

The background image shows three people in a modern office setting. A woman with curly hair, wearing a light green shirt, is sitting at a wooden desk and smiling while looking at a laptop. Two men are leaning over her, looking at the screen. One man is wearing a blue denim shirt, and the other is wearing a red and white checkered shirt. The office has large windows, hanging light bulbs, and a wooden ladder leaning against the wall.

**How a leading
tech company got
its cloud migration
strategy right**

Client background

Client: An American multinational technology company

Industry: IT, IT services, IT consulting

Products or services: Computer hardware, computer software, IT services, IT consulting

Geography or areas of operations: Worldwide

Number of employees: Over 49,000

Challenges

The technology conglomerate wanted to adopt a standardized approach to AWS cloud migration. They wanted a partner who could help them identify the right workloads, the right migration methodologies and propose a resilient governance model to run effectively on a cloud set up. They also wanted to address the following requirements;

- Under-utilized capacity in their analytics platform that led to disproportionately high cost of operations
- Disparate reporting environment leading to high licensing costs
- Lack of scalability in the existing architecture
- 70-80% data source for their analytics and reporting was hosted on-premise on multiple platforms
- Need for optimization of design and performance improvement on Vertica

A standardized approach to AWS cloud migration enabled 35% reduction in IT spend and 25% reduction in cost of reporting licenses

Solution

The client wanted a cloud environment to improve speed of production and reduce maintenance costs. Wipro did a full analysis of their current landscape and provided the following solution;

- Built on-premise tools to connect with cloud through AWS Direct Connect service - a cloud service solution that establishes a dedicated network connection from on-premise to AWS
- JDBC/ODBC for connecting to SQL client and reporting tools
- Recreate the existing SQL (ETL) scripts to generate flat files to be pushed to S3
- Delivered Amazon Elastic Container Service (ECS) to run their sensitive and mission-critical applications workflow used for scheduling ETL jobs
- Used Amazon Elastic MapReduce (EMR) – a tool for big data processing and analysis - for transforming and parsing large volume of data quickly and cost-effectively

Business impact

Wipro provided the client a scalable architecture on cloud. This helped the client in minimizing the cost of operations by moving their on-premise analytics platform to AWS and also reduced the cost of managing reporting licenses significantly by consolidating their reporting environment.

9 TB of data migrated on AWS Cloud resulting in 30-35% reduction in costs across the landscape

25% reduction in current spend on reporting licenses.

“Wipro provided a scalable architecture on Cloud leveraging AWS Direct Connect Service, which helped the client to consolidate its reporting environment and achieve significant performance improvement. Automation, optimization, cost reduction and speed to production were their key asks, and our solutions coupled with our ‘business first’ approach helped them embark on their cloud migration journey with minimum disruptions to business.”
